Modern Data Analysis
Lab 3 - The pandas Package ¶
Student: Odumosu Oluwasomidotun Adebowale
Student No.: 9
Assigned Tasks: 5, 7, 17, 22, 35, 38, 49, 54, 56, 61, 67, 72
Course: Modern Data Analysis
Program: Computational Modeling in Technology and Finance
Lecturer: Professor Prozorov O.A.
Introduction
This notebook contains my assigned tasks from Lab 3 on the pandas package.
[2]:
import pandas as pd
import numpy as np
print("Pandas version:", pd.__version__)
Pandas version: 3.0.5
Task 22 - Display the Last 3 rows of the DataFrame object (tail method)
This task was selected for the first submission because it demonstrates a simple and important pandas operation for viewing data.

JupyterLab
Python 3 (ipykernel)
Task 22 - Display the Last 3 rows of the DataFrame object (tail method)
This task was selected for the first submission because it demonstrates a simple and important pandas operation for viewing data.
[10]:
students = pd.DataFrame({
"Name": ["Kunle", "Elena", "Peter", "Dotun", "Stephen"],
"Score": [78, 85, 69, 91, 64]
})
students.tail(3)
[10]:
Name Score
2 Peter 69
3 Dotun 91
4 Stephen 64
The above tail(3) method outputs the last 3 rows of the DataFrame object, corresponding to indices 2, 3, and 4. The original DataFrame remains unchanged.
